REDBEARD

About Redbeard Group

Redbeard Group is a technology company. We build our own platforms and supply and integrate proven international technology, so organisations can verify who is on site, what services are being delivered, and whether every contract is being honoured. **Redbeard is new. The people and platforms behind it are not.** We are led by director Werner Terblanche, whose career spans security, ICT and technology.

You pay for the service. Can you prove you got it?

The assurance gap

Institutions pay for security, cleaning and other outsourced services, yet few can prove they are receiving them. Skipped patrols, unmanned posts and missed cleaning shifts can go unnoticed while the invoice is still paid in full.

What a breach can cost you

Your reputation. The public sees your site, not the provider's name.

Your liability. You can be drawn into labour and regulatory disputes.

Your proof. Without records, you cannot show you checked.

Our answer

Independent monitoring that holds every provider, team and site to one measurable standard, with time-stamped reports that stand up in contract reviews and audits.

Solutions

Smart Guard
Real-time guard tracking, attendance, patrol routes and incident management in one platform, so a security contract becomes time-stamped evidence that stands up in reviews and audits.

Smart Clean
The same approach for cleaning contracts: verified attendance and cleaning rounds, so you pay for what was delivered.

Kinetic Alert
Smart detection. Rapid response. Built to spot an event early and get the right people moving quickly.

FOTAS fibre-optic sensing
Turns fibre-optic cable into thousands of virtual sensors that detect and locate intrusion, digging and climbing in real time. FOTAS is made by Samm Teknoloji; Redbeard supplies and integrates it.

Quantum WFM
Compliance with South African labour law is a statutory responsibility. Quantum WFM backs it with proof: face-matched, geo-fenced clock-ins flow straight into scheduling and payroll. Built in South Africa and live at 13 operations.

REDBEARD

Who we serve

Mining and industrial

Perimeter sensing and verified patrols for large, open sites.

Commercial and retail

Guard and cleaning verification, with shifts and payroll in one view.

Education

One view of every security and cleaning provider across campuses.

Public sector

Contract compliance and accountability for municipalities and institutions.

Capabilities behind every solution

Advise
Security, ICT and energy advisory.

Identify
Multimodal biometrics (face, fingerprint or iris) backed by computer vision.

Monitor
AI-driven security operations that turn alerts into action.

Respond
Emergency response technology, including medical-ID apps.

Manage
Scheduling, biometric attendance and payroll for shift-based workforces.

Automate
Workflow automation and compliance engines.
